***Turkish Economy and  
Banking System in 2013***

# Economic Developments and Banking System in Turkey in 2013

## Global Economy

**Moderate recovery.** Global economy grew by 3 percent in 2013 rather below the expectations. Main reasons behind this were limited recovery in developed countries, coupled with loss of growth momentum in developing countries, particularly in China, while the EU economy has continued to grow at a low level.

**Fluctuations in financial markets.** The Federal Reserve announced to decelerate liquidity increase based on the improved economic performance of the US economy. Followed the announcement long-term interest rates rose in the country, leading to decline in the risk appetite in the global markets and asset prices. Money and capital markets had to go through equally volatile and remarkably risky period especially during the second half of the year.

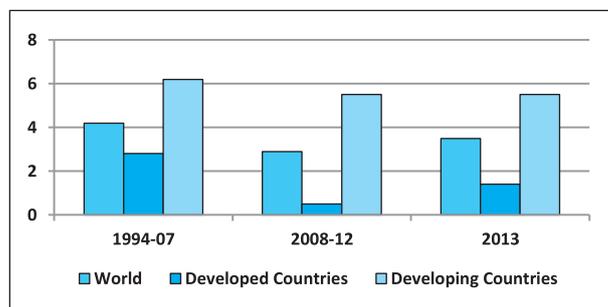

**Slower growth in developing countries.** Capital inflow to developing countries slowed down; capital outflow was observed in some countries; cost of borrowing from international markets increased; and global capital became more sensitive towards macroeconomic imbalances. In several developing countries, national currencies depreciated, interest rates increased, and asset prices dropped rapidly. Most of the developing countries implemented rebalancing policies to minimize the negative effects of global risks at the expense of slowing down the growth rate.

**Low inflation remained.** Inflation rate continued to remain at a low level in developed countries and, had insignificant change in the developing countries. The trade volume accelerated, albeit limited.

**Surge in outstanding domestic debt in developed countries.** The ratio of outstanding domestic debt to national income reached high levels in developed countries, while it remained low in the developing countries. In developed countries, the level of public debt stock and the problems in banking sector caused the interest rates to remain at low levels.

**Banking restructuring remains on the agenda.** Within the framework of restructuring the banking sector, several countries continued to implement measures aimed at strengthening both the financial structure and aggregating the functions of banks.

## Turkish Economy

**Growth was in line with the target.** Re-accelerated growth of Turkish economy was realized at the level of foresight as 4 percent in constant prices. Gdp at current prices increased by 10.2 percent to TL 1.517 billion thus reached USD 820 billion with an increase of 4.3 percent in dollar terms. Gdp deflator was 6.9 percent.

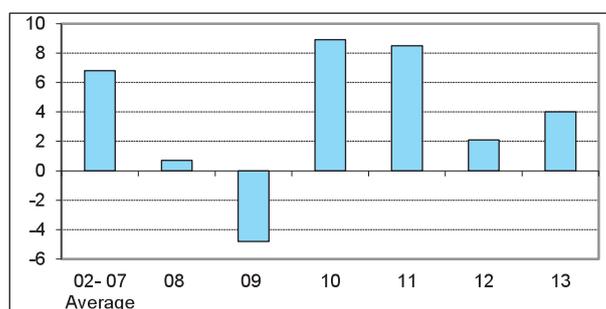

Income per capita increased by 3 percent to USD 10,782. Considering sectors, the growth rates of the industry, services, and agriculture were 4 percent, 3.1 percent and 5.4 percent in fixed prices, respectively. The share of industry in gdp was 33 percent, while that of services sector was 58 percent.

**Growth was supported by domestic demand.** Increase in domestic demand by 6.3 percent supported the growth, while the contribution of foreign demand remained weak. Consumption expenditures increased by 4.8 percent. Investment expenditures expanded by 23 percent in public sector, while the rate of increase remained below 1 percent in private sector. The shares of private consumption expenditures and investment expenditures in gdp were realized 75 percent and 16 percent, respectively.

**Savings ratio declined.** According to the forecasts of Ministry of Development, the ratio of domestic savings to gdp declined by 1.9 percentage points to 12.6 percent in 2013. Savings ratio remained unchanged in public sector, while it dropped below 10 percent in private sector for the first time within the past three decades. The ratio of savings deficit to gdp reached 6.9 percent by an increase of 1.1 percentage points.

**Employment increased.** According to the Turkish Statistical Institute, total labor supply amounted 28.3 million, while total employment was 25.5 million. Compared to the same period in the previous year, the labor force increased by 884 thousand people. Labor force participation also continued to rise and reached the level of 50.8 percent. While the number of employees increased by 703 thousand, the number of unemployed also increased to 229 thousand people. Hence, the number of unemployed reached 2.7 million, and unemployment rate was recorded as 9.7 percent. Hourly labor cost index increased by 12.7 percent compared to the previous year. The rate of increase was 9.9 percent in industry sector, and 14.2 percent in services sector.

**Inflation accelerated.** Consumer Price Index (CPI) rose well beyond forecasts to 7.4 percent. Although lower base effect in energy prices pulled to inflation down the effects of accelerated domestic demand, depreciation of TL, and the increase in food prices put the pressure on inflation upwards. Producer Price Index (PPI) increased by 7 percent on annual basis. Annual average price increase was 7.5 percent for CPI, and 4.5 percent for PPI.

**Policy interest rates went up.** Central Bank kept the market funding interest rate low in the first half of the previous year given that inflation remained at a reasonable level, capital inflows were substantial, and also considering the growth target. In contrast, the Central Bank kept required reserve ratio at a high level, and increased reserve option coefficients taking into account rapid growth in loans, and continuing process of the appreciation of TL. While reducing the policy interest rate from 5.50 percent in December 2012 to 4.50 percent, the Central Bank pulled the overnight borrowing interest rate, the lower band of interest rate corridor down to 3.50 percent by a total decrease of 150 basis points, and the overnight lending interest rate, representing the upper band of the interest rate corridor, to 6.50 percent by a total decrease of 250 basis points. Thus, the weighted average funding cost of banks from the Central Bank fell by 150 basis points in the first half of the year.

Net domestic assets of Central Bank increased by TL 8 billion to TL -3 billion, while net foreign assets rose by TL 11 billion by the year end and stood at TL 96 billion. Monetary base increased by 29 percent to TL 94 billion level at the end of the year. Monetary base was recorded as TL 84 billion at the end of first half, and amounted to TL 94 billion by the end of second half.

During the second half of the year, TL depreciation against foreign currencies gained momentum due to rise in interest rates in global markets, slowdown in capital inflow, unusual domestic political developments, changes in portfolio preferences, and rise in currency substitution. Turkish Central Bank raised the interest rates, changed the composition of liquidity supplied to the market, following a policy of liquidity tightening. ## **Banking System**

### **Banking sector contributed the growth positively.**

During the recent five years, financial stability remained strong in Turkey. Banking sector, representing a major part of the financial sector in Turkey, performed successfully, based on criterias such as growth, capital adequacy, asset quality, liquidity, and profitability. Over the past five years, in fixed prices, total assets rose by 62 percent, and the ratio of total assets to gdp rose by 31 points to 105 percent.

Total loans grew with 23 percent in fixed prices, rising the share in total assets by 3 percentage points, and 61 percent loan to gdp ratio reached 69 percent. Total loan portfolio was dispersed between large companies, SMEs and consumers with approximately with one-third share in risk spectrum. Credit risk remained at a reasonable 3 percent level. The share of securities portfolio in total assets kept further declining. As a result, the share of risk-weighted assets included in capital adequacy calculation increased in the balance sheet.

Although, more than half of the balance sheet was financed by deposits of residents, recently, the contribution of foreign borrowing to asset financing has increased. Shareholders' equity financed 11.3 percent of the assets. Therefore, leverage ratio remained at a prudent level of 8.9. In off-balance sheet transactions, a quick increase was recorded in derivative transactions item particularly due to transactions aimed at management of currency and interest risks. Net foreign exchange position risk remained at a low level.

### **Proactive measures supported financial stability.**

Shared aim of monetary and prudent banking measures taken for the purpose of limiting the effects of global risks on growth and financial stability has been to keep liquidity at high level, to limit the loan growth, to fix share of individual loans in total loans at one-third level, and to manage the risks properly. Decisions taken in G20 meetings and regulations recommended by the international organizations were rapidly put into force.

Within this framework, capital adequacy ratio of at least 12 percent was required. The ratio required reserves to balance sheet doubled to 11 percent level. The Central Bank stopped interest payment to required reserves. Banks were asked to have higher capital adequacy ratio for consumer loans and credit cards. General provisions set aside for loan portfolio were increased.

Conservative regulations enabled banks to operate with high confidence coefficient, but led the profit margin decline in line with the higher intermediation cost. Depending on the efforts of banks to enlarge their loan volume, capital adequacy followed a downward trend, return on equity declined.

### **Main indicators of 2013 showed a sound balance sheet structure for banking sector revealing risk compliance and supportive of growth.**

Operations supported by new technology infrastructure, rapidly expanding branch network as well as through non-branch location and mobile applications, the banking sector contributes to the growth of the financial sector through diversification and increase of non-loan financial services.
